

# **Cyber Strong UC: Year-Round Information Security Awareness Campaigns**

## **2018 Golden Sautter Award Winner**

---

**UCCSC, August 2018**

**Kip Bates, UC Santa Barbara**

**Julie Goldstein, UCOP**

**Bill Green, UC Riverside**

**David Hatter, UC ANR**

# Agenda

- What is the “Cyber Strong UC” project?
- Background
- The creative process
- Show & Tell
- Adapting the materials for campus use
- Resources for the UC community

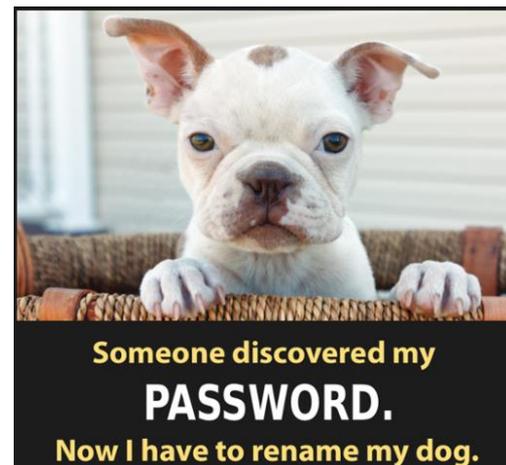

[www surfersam.com](http://www surfersam.com)

# What is the “Cyber Strong UC” project?

Develop a proactive, year-round information security awareness program that the systemwide ISA Workgroup and all other UC locations can leverage.

- Calendar of themes
- Series of Information Security Awareness “toolkits” following the themes
- Variety of materials and resources to be used as-is or customized
- Repository for ongoing use
- Strategies for spreading awareness messages
- Save everyone time and resources, and share broadly

# Background

## Origin:

The systemwide Information Security Awareness Workgroup is an extension of the 2016 systemwide workgroup for National Cyber Security Awareness Month

## Workgroup Focus:

- A strategic approach to security awareness and related outreach
- Building good cybersecurity habits across UC
- Information and resource sharing

# Background (cont.)

## Ongoing issues:

1. Continued information compromises and breaches that could be avoided by safer behavior
2. Once-a-year training isn't sufficient
3. Every UC location doing its own awareness program from scratch is inefficient

**So we decided to tackle the issues together with this project.**

# Project Team

UC ANR	UCD	UCD Health
UCLA	UCOP	UCR
UCSB	UCSC	UCSD
UCSD Health	UCSF	

# The Creative Process

## A Collaborative Effort that continues beyond the meetings

DECISION: Yes, just the Kip video. We also reaffirmed we'll only use CC videos. Julie will stop listing non-CC.

8. ~~CNN video: Spring Cleaning Your Digital Life: <https://www.youtube.com/watch?v=EG0-1YvbVTs>  
— Not bad except for the last tip which doesn't mention wiping devices before recycling them.  
RZ—I don't like this.~~
9. ~~Staysafeonline.org video that essentially puts the info from the tip sheet in #5 into a "video".  
One chunk of text per slide: <https://www.youtube.com/watch?v=1qvBecNUUeE>  
RZ—I like this.~~
10. ~~BBB video at <https://www.bbb.org/digital-spring-cleaning/>. Similar in feel to video #9—text  
summary of what to do each week for digital spring cleaning (from the infographic, I think).~~
11. ~~RZ—While watching video #9, I saw this one from 2016 that I prefer instead of #8:  
<https://www.youtube.com/watch?v=Ntem00uAx4M> (CC) (1:25)~~

### Holiday online shopping cybersecurity mini-campaign:

- \* Master doc is in Box at <https://app.box.com/file/236718349330>.
- \* We'll use the materials we compiled. We made one tweak to the "Keep Calm and Shop Safely" poster.
- \* All materials, including editable versions, will be in Box for workgroup members to use and tweak as desired.
- \* The article, posters, videos, and links to references will also be posted on the systemwide SA website so people can use or point to them there, too.
- \* Most of what we have for this mini-campaign is not student focused, and the messages likely will not resonate with students. We don't really have a student "hook" for this one. Might be worth workgroup members sending the materials to Student Affairs or ResLife to see if they want to use any of them. Maybe the "Keep Calm and Shop Safely" poster? Maybe some of the tweets?

# The Creative Process

## A Collaborative Effort that continues beyond the meetings

[Twitter-ready social posts from Educause – initial review by Petr

(Basic handout from the webpage. 1-page, 2-sided)

**Cybersecurity: Make It a Habit!**

UNIVERSITY OF CALIFORNIA Information Security Awareness

Good habits are the foundation of cybersecurity just like they are for safety and security in the physical world -- like locking your front door or wearing your seat belt in the car.

Here are eight important cybersecurity habits to incorporate into your online life. Try to make these habits automatic. They will help protect your information, your family and your work. They'll also reduce your risk of getting scammed!

1. Always think twice before clicking on links or opening attachments.
  - Even if they look like they're from someone you know.
  - Whenever possible, go to web pages by a path you know is legitimate instead of clicking on a link in a message.
  - If an attachment is unexpected, contact the sender by a method you know is legitimate to confirm they sent it.
2. Verify requests for private information (yours or anyone's), even if the request seems to come from someone you know.
  - Con artists know how to fake their identity.
  - Check your financial statements and credit reports regularly.
3. Protect your passwords.
  - Make them long and strong.
  - Never reveal your password to anyone.
  - Use different passwords for different accounts.
  - Use different passwords for work and non-work activities.
  - Click "no" when websites or apps ask to remember your password.
  - Use strong authentication where possible, such as multi-factor authentication (MFA), fingerprints, and tokens.
4. Protect your stuff! Lock it up or take it with you before you leave.
  - Secure your area and lock your computer screen before leaving them unattended -- even just for a second.
  - Take your phone and other portable items with you or lock them up.
  - Password protect all of your devices. Use strong authentication where possible.

security.ucop.edu

**5. Keep a clean machine! Keep your devices, apps, browsers, and anti-virus/anti-malware software patched and up to date\*.**

UNIVERSITY OF CALIFORNIA Information Security Awareness

- Automate software updates.
- Restart your devices periodically.
- \*Find out what you need to do, if anything, for devices managed for you.

**6. Back up critical files.**

- Store backups in a physically separate location from the originals.
- For critical work files, use storage options that are approved by your UC location and are backed up regularly.
- For personal files, save a backup copy of anything critical on a separate hard drive, data stick, CD/DVD, etc., and store it securely.
- Test your backups periodically.

**7. Delete sensitive information when you are done with it.**

- Follow UC's records retention schedule.
- Better yet, don't store it in the first place if you don't need to.
- UC definitions of sensitivity levels: security.ucop.edu/policies/

**8. If it's suspicious, report it!**

- Report suspected scams and other suspicious activity to your supervisor, and follow your location's reporting protocol.

### UNIVERSITY INFORMATION SECURITY

Welcome, and thanks for visiting. At UC, protecting the confidentiality, integrity and availability of our Institutional Information and IT Resources is a shared responsibility. This site provides guidelines, resources and background on UC's approach to this critical initiative. Click on "Policies" at the top of the page to learn more about your role in helping keep UC safe from electronic intrusion and theft.

### UC CYBER-RISK COORDINATION CENTER

The Cyber-Risk Coordination Center (C3) is the programmatic arm for the University's Cyber Risk Governance process. The C3 coordinates systemwide cybersecurity training, events, programs and tools. [Learn more.](#)

### UPCOMING EVENTS

#### Cybersecurity Summit:

The next systemwide Cybersecurity Summit will be held on October 24, 2018 at UC Riverside. Please visit the [Summit webpage](#) for details.

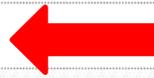

### ANNOUNCEMENTS

- **Back-to-School Cybersecurity:** Avoid typical beginning-of-the-year scams with a few good habits to help you stay safe. Find out more in this [short article](#). Additional resources to help promote awareness are also available in this [toolkit](#).
- **Travel Cybersecurity:** The summer is a time for travel for many in the UC community. Check out these [cyber-smart travel tips](#) to help protect you when you're on the road. Also check out UC's travel cybersecurity awareness [toolkit](#) designed to help protect you, your family and the UC community.
- **Training:** Annual cybersecurity training is part of UC's effort to address cyber threats to the University. There are two cybersecurity training courses this year: a full course, and a 35-minute refresher course for those who took the full course last year. All new UC employees are required to complete this training.

### I WANT TO...

- » Secure my device
- » Find security awareness resources
- » Find incident response resources
- » Find campus information security websites
- » View UC IT Policies and Standards

**5 ONLINE SECURITY TIPS FOR SMARTER TRAVEL**

Don't let online security concerns derail your travel plans.

Whether you plan to explore the US or abroad, for the beach or the Mountains, there's a wealth of options in both directions. Some free WiFi entry type will help you remain throughout your journey.

**Keep a clean machine.**  
Protect your device on the way with the latest software. Periodic updates will keep your system secure.

**Stop and think before you connect to public WiFi.**  
WiFi is available in many locations, including at airports, hotels, restaurants, parks, and schools, but these networks are sometimes open and insecure. Use caution when you connect to public WiFi and be cautious about the sites you visit and the information you send.

**Paid WiFi doesn't mean safe WiFi.**  
Just because you paid for WiFi access, it doesn't mean it's safe. Beware of websites in the airport that downloading or your communications, as well as your personal information from hackers.

**Beware of evil twins.**  
Evil twin connections will attempt to steal your information. If you connect to a public WiFi network, be sure to verify the network name and location. If you connect to a public WiFi network, be sure to verify the network name and location. If you connect to a public WiFi network, be sure to verify the network name and location.

**Use a VPN to encrypt information on all of your devices.**  
If you can't verify the site you're visiting, the only way to guarantee your security is to use a virtual private network (VPN). A VPN will encrypt your personal data in wireless networks. Remember, VPNs require you to install software on your device. Use a VPN to encrypt all of your communications, no matter where you travel.

Learn more at [security.ucop.edu](http://security.ucop.edu)

**Keep it Safe**

Keep computers & electronic devices SAFE when you travel.

- ✓ Encrypt and password protect your computer and all devices.
- ✓ Connect securely - avoid free WiFi and use a VPN.
- ✓ If you are going abroad, the computer you take should contain minimum information. Use just a regular work computer.
- ✓ Don't leave your device unattended - keep them with you.
- ✓ Wait to get home before posting photos or comments about your trip to social networking sites.

## Outreach Strategies

One of the biggest challenges for any information security awareness program is getting information to the intended audience in a way that is effective. Following are a variety of strategies that locations throughout UC have found successful. See if any might work at your location. Remember: It's OK to start small and build. And look for opportunities to leverage communication channels, outreach and events that are already happening across campus.

### Quicklinks:

[| Web pages](#) | [| Social media](#) | [| Work with other departments or groups](#) | [| Ideas for posters](#) | [| Table tents](#) | [| Screensavers/Startup screens](#) | [| Email](#) | [| Newsletters/Newspapers](#) | [| Event calendars](#) |

### Web pages:

- Put awareness materials on a central, one-stop-shop webpage for easy reference and linking.
- Banner on campus, ITS and/or Security websites. See if other departments will post your banners on their websites, too.
- Messages or banner on the Academic Information System login/portal page. Also the Learning Management System.

[\(back to Outreach quicklinks\)](#)

### Social media:

- Might be best for communicating with students.
- Work with departments on campus that already have social media pages or feeds. Send them ready-to-use messages. Send them your posts and tweets to re-tweet or link to.
- Campus Communications' feeds (provide content to them).
- Tom Andriola's (UC CIO) [twitter feed](#) -- targets the systemwide IT community (you can also suggest content).

[\(back to Outreach quicklinks\)](#)

**Work with departments or groups that already work with your target audience. Suggestions are below.** They may have ways to connect that aren't available to you directly. They can also tailor or customize materials to meet the specific needs or interests of their community. Share awareness campaigns and other content with these groups as a way to support them in helping to keep their communities safe and informed.

Los Angeles Health	<a href="#">Richard Rea</a>

## Outreach Strategies, cont.

- **For students:** ResNet, RAs, Housing, Student Affairs, Student orientation, Departmental/Board of Study, Connect with professors of large lecture classes and/or students.
- **For faculty and staff:** Department heads, Deans, Work with your location's equivalent of Division/Department IT Liaisons/contacts/Champions/Partners. Email from the CISO or CIO can also be effective for this group.
- **For researchers:** Research and Grants department. Is there a support group for researchers? If so, try to connect with that group, too.
- **For graduate/professional students:** Target departmental and grad student social media feeds.
- **For clinicians:** Posters in elevators geared toward people who work in the facility. Poster "tilt-ups" at cafe checkouts; tabletents on cafe tables.
- **For retirees and emeriti:** Connect with the point person for your location's Retiree and Emeriti Center or Retirement and Emeriti Association. Each campus has a role that works with this community. Share campaigns and other content with the point person. They can tailor or customize the materials and distribute through already-existing channels, include in newsletters, etc.
- **Present cybersecurity awareness info at existing meetings.** Try to get 10 minutes on the agenda of a standing meeting, or work with departments/groups to set up a special meeting for a security awareness presentation or discussion.
- **Work with your location's Communications or Marketing groups/Marketing Council.** They often have existing ways to communicate with campus and "ins" into more targeted communication channels.

[\(back to Outreach quicklinks\)](#)

### Ideas for posters:

- Put cybersecurity awareness posters on the inside of bathroom stall doors in dorms, administrative and classroom buildings, and clinician areas.
- Put posters in elevators.
- Send posters to departments (through Mail Services if available) to post on administrative bulletin boards.
- Send posters (print or electronic) to your cyber champions or partners to share with their communities.
- Campus shuttle buses and kiosks; also local public buses that students use.
- Give to RAs to put up in dorms.
- Library study rooms and study cubes (partner with the Library to post, if possible).
- Video bulletin boards and other digital signage (for posters and videos).
- Give posters to IT support techs to post when they're visiting clients.
- Post banners around campus. Work with campus Events department to tap into existing signage options.

## Welcome

[security.ucsb.edu](https://security.ucsb.edu)

The Internet is part of everyone's life, every day. We use the Internet at work, home, for enjoyment, and to connect with those close to us. However, being constantly connected brings increased risk of theft, fraud, and abuse.

No country, industry, community, or individual is immune to cyber risks. As individuals, cybersecurity risks can threaten our finances, identity, and privacy. Universities, which are characterized by their openness based on academic freedom, are among the most widely attacked targets.

Our way of life depends on critical infrastructure and the digital technology that operates it. The University takes steps to ensure the security of our infrastructure and systems, but cybersecurity is a *shared responsibility*, and everyone can take a few simple steps to make the Internet more secure!

## What's New in CSIT

### Change in Access to Services and Applications

Added May 18, 2018

On May 29, 2018, IT will implement a new login process which may affect your access to services and applications. You may have noticed a link to "UCANR Active Directory (Beta test)" on the UC ANR Portal login page. The link was a test of our effort to manage staff computing credentials which are separate from UC Davis and...

### New SiteBuilder Training Sessions Offered

Added April 17, 2018

SiteBuilder Training Sessions CSIT is kicking off a new round of SiteBuilder training sessions starting in May. The day-long class is designed for all ANR staff members in need of proficiency creating and maintaining web sites. We will provide the basic knowledge to get users up and running with...

### Security Change for SiteBuilder Sites

Added March 21, 2018

CSIT has removed a widely distributed, but rarely used, feature from most SiteBuilder pages. ANR sites using the recommended "mobile friendly design" have universal buttons at the top of their pages, including "Share," "Print" and "Site Map." Until recently, there was also an "Email"...

Ask CSIT a question button with a question mark icon.
